CINTEXA Financial Intelligence

Release Regression Checklist · Document version 1.2 · Through phase 35 + gap-close

FI figures must come only from **posted** Finance ledger data. Draft journals never count as results.

Bootstrap

- ■ FINANCE_PHASE10_21_STATEMENTS and FINANCE_PHASE22_35_STATEMENTS applied (bootstrap / migrate)
- ■ FINANCE_INTEGRATION_STATEMENTS applied
- ■ GET /api/finance/intelligence/readiness → ready: true
- ■ GET /api/finance/intelligence/smoke → passed: true
- ■ GET /api/finance/intelligence/health-check → overall ok (or documented degraded modules)
- ■ Sales outbox worker is running (or a manual outbox drain is available in the environment)
- ■ Pending finance.invoice / finance.payment outbox rows can leave pending and reach sent or a terminal failure state
- ■ Finance organisation selected; functional currency confirmed

Core analysis

- ■ Overview KPIs match trial balance (posted only)
- ■ Overview chart / monthly movement uses posted periods only
- ■ Dashboard widget on main app dashboard reflects same posted KPIs (or empty)
- ■ Ratios page loads (null metrics when denominators missing — not invented)
- ■ CAC / customer-acquisition page does not invent CAC when inputs are missing
- ■ P&L / Balance sheet / Cash flow lines + CSV download
- ■ Reports hub opens statement links and CSV exports work
- ■ Working capital and cashflow routes load without errors
- ■ Revenue and expenses analysis pages load from dashboard/posted data
- ■ Empty org: empty states, no sample GHS amounts

Capital & returns

- ■ Create investor, share class, shareholding → cap table %
- ■ Contribution does **not** change ownership
- ■ Dividend draft → generate lines → approve
- ■ Dividend mark-paid / void path does not invent payable balances
- ■ Cap table with more than one share class (when used) still totals correctly
- ■ Investor concentration page matches share register (or empty when none)
- ■ Valuation NAV from equity
- ■ Valuation scenario save does not alter the ledger

Planning

- ■ Budget lines + vs-actual from posted ledger
- ■ Budget activate from draft
- ■ Budget scenario adjustment does not change posted actuals
- ■ Alert rule evaluate + acknowledge
- ■ Evaluate with no rules configured shows a clear empty / zero state
- ■ Health summary signals do not invent numbers beyond posted KPIs

Integration

- ■ Sales invoice outbox → Finance invoice + journal
- ■ Sales payment outbox → Finance receipt + AR allocation (when invoice exists)
- ■ Unpaid Sales orders never post revenue to Finance
- ■ Payment bridge page (/financial-intelligence/payment-bridge) shows payment-related events after a Sales payment
- ■ Failed outbox / retry path is visible (event or outbox status), not silent
- ■ Integration centre shows events; party links list loads
- ■ Reconcile requires finance:admin and accepts a valid period range
- ■ Credit/debit note / void invoice path posts reversing journal (no invented CN balances)

Ops / advanced

- ■ FX rate + convert
- ■ POST /fx/revalue returns disclosure (rate + balances) without inventing a revaluation journal when cost bases are absent
- ■ Board pack create/publish/bundle
- ■ Board pack annotation can be added without changing statement figures

- ■ Comparative analysis run (period vs period) from posted ledger only
- ■ Intelligence agents generate rule-based recommendations only (no generative invented figures)
- ■ Agent accept / dismiss does not change ledger balances
- ■ KPI targets evaluate
- ■ Saved views create + open path
- ■ Export job history records statement export requests
- ■ Stress scenario from posted YTD
- ■ Working-capital snapshot capture
- ■ Tax intelligence and investor concentration pages load (empty when no data)
- ■ Notification digest + deliver (in-app; webhook if FI_NOTIFICATION_WEBHOOK_URL is set)
- ■ FI settings page links to Finance settings and integration
- ■ Permissions matrix page loads
- ■ FI audit trail lists FI-related audit events (or empty)
- ■ API index and version pages load; version shows phase 35+ / smoke pass
- ■ System health page matches readiness/smoke

Permissions

- ■ ledger:read can view FI; create/approve actions gated
- ■ User **without** ledger:read cannot open /financial-intelligence/* (permission denied)
- ■ finance:admin required for integration reconcile and notification deliver
- ■ finance:approve required for dividend approve / board pack publish / budget activate
- ■ audit:read for FI audit trail; denied without it

Deferred / out of scope (confirm still not claimed as done)

- ■ Full automated FX revaluation **journals** (cost-base driven) — disclosure only unless explicitly enabled later
- ■ PDF board-pack export — CSV and live bundles only unless PDF is shipped
- ■ Email notification channel — in-app + optional webhook only unless email provider wired
- ■ Sales payment **reversal** bridge — reverse in Sales does not silently invent Finance reversals unless implemented
- ■ Generative AI insights — not part of FI; agents remain rule-based
- ■ Payroll / inventory / bank API feeds — not under FI

Ownership (ops, not code)

- ■ Named owner: who publishes board packs
- ■ Named owner: who approves dividends
- ■ Named owner: who acknowledges alerts
- ■ Named owner: who runs period reconciliation
- ■ Temporary CI/deploy secrets (e.g. GitHub PAT) revoked after use

Sign-off

- ■ Tester name: _____ Date: _____
- ■ Environment (e.g. staging): _____
- ■ Build / commit SHA: _____
- ■ Result: Pass / Pass with notes / Fail
- ■ Notes: _____

Suggested minimum pass bar

1. Bootstrap section all green (including outbox worker).
2. Core analysis + empty-org rule.
3. At least one capital path and one budget/alert path.
4. Invoice **and** payment bridge once each in a non-prod org.
5. Permissions: viewer can read; creator cannot approve dividends/packs without approve perms; no `ledger:read` is denied.
6. Deferred section reviewed so release notes do not claim PDF/email/full FX reval/generative AI unless shipped.
